# 1 General

## 1.1 Objective

WSP Opus have been commissioned by the Wakatipu Heritage Trust to provide structural design services for the Bullendale Powerhouse Reconstruction at Dynamo Flat, in the Richardson Mountains in Otago. The Design Feature Report (DFR) is a detailed document defining the structure's design criteria and recording the decisions or outcomes. This report outlines the design loading, structural modelling assumptions, material properties, foundation requirements and design standards. The DFR also defines the calculation procedure and checking principles to be followed, providing a clear explanation of the full design.

## 1.2 Scope

In general terms, the scope of work for this consent is as follows:

- Detailed foundation design
- Detailed design of the superstructure.

## 1.3 Means of Compliance

The design of the structure is in compliance with the New Zealand Building Code (NZBC) by considering the acceptable solutions and verification methods addressing clauses B1 Structure and B2 Durability.

Compliance with B2 Durability shall be achieved by designing to nominated design standards indicated by B2/AS1 for all structural materials except steel. For steel, B2 Durability compliance shall be achieved with an Alternative Solution.

## 1.4 Design Life

The structure is designed for a minimum design life of 50 years as specified in the New Zealand Building Code.

The design life of non-structural elements and cladding specification are by others and are not covered by this design features report.

## 1.5 Design Standards

The following design standards are used for the design of the structure and for the design of any secondary structural items as outlined in B1/VM1:

AS/NZS 1170.0:2002	Structural Design Actions Part 0: General Principles
AS/NZS 1170 1:2002	Structural Design Actions Part 1: Permanent, Imposed and Other Actions
AS/NZS 1170 2:2011	Structural Design Actions Part 2: Wind Actions
AS/NZS 1170 3:2003	Structural Design Actions Part 3: Snow and ice actions
NZS 1170 5: 2004	Structural Design Actions Part 5: Earthquake Actions - New Zealand
NZS 3101 : 2006	Concrete Structures Standard
NZS 3603: 1993	Timber Structures Standard
NZS 3604: 2011	Timber Framed Buildings

The following technical references/documents may also be used:

- The New Zealand Building Code.

The above lists are not exhaustive and other New Zealand Standards and technical references/documents shall be referred to as appropriate and the design and construction of structural elements shall comply with these also.

## 2 The site

### 2.1 Seismic Design Parameters

The site has been classified as Site Class D – Deep or Soft Soil, in accordance with NZS 1170.5. An Importance Level of 2 has been adopted for the building due to the potential of being used as a shelter in a storm event.

### 2.2 Geotechnical Information

No geotechnical information has been received for the site, however it is assumed that “good ground” in accordance with NZS3604: 2011 will be achieved. This assumption will need to be confirmed onsite prior to any work taking place.

### 2.3 Access and Constructability Issues

The site is in a very remote location, materials will have to be flown in and concrete mixed onsite.

### 2.4 Foundations

The foundation system consists of anchor and ordinary piles designed to NZS3604: 2011.

## 3 The Structure

The proposed structure comprises of a single building of approximately 90 m<sup>2</sup>, built as close as possible to match the original structure.

### 3.1 Gravity Load Resisting Structure

The gravity loads are transferred through the rafters of the roof structure to the timber framed walls which carry the loads through the foundations and into the ground. Floor loads are transferred through floor joists to bearers and into the foundations.

### 3.2 Lateral Load Resisting Structure

The structure relies on a plywood roof diaphragm, walls and cantilever posts to resist wind and seismic loads. Due to the rear wall being completely open the cantilever posts are designed to take the lateral load of half the building in the across direction.

## 4 Design Actions

The occupancy of this buildings is less than 250 people, and it is therefore considered as Importance Level 2, in line with the requirements of NZS 1170.

- Seismic return period of 500 years
- Wind return period of 500 years
- Snow return period of 150 years

## 4.1 Gravity Loads

### 4.1.1 Self-Weight (Dead Load)

The self-weight of the building was calculated by considering weights of architectural and structural elements. Standard material weights have been used for materials such as reinforced concrete and timber framing.

## 4.2 Imposed Loads

Table 1 below summarizes all vertical loads including both superimposed dead and live loads. These are in accordance with AS/NZS 1170.1:2002 and either meet or exceed the requirements for the various occupancy/activity categories.

*Table 1 - Superimposed Actions*

Level/Area	Use	Live Load (kPa)
Floor	General Area	2
Roof (general)	Maintenance only	0.25

## 4.3 Wind Loads

Wind loads were derived in accordance with AS/NZS 1170.2:2002.

The natural frequency of the structure is expected to be greater than 1Hz, therefore the structure is not wind sensitive. A static analysis procedure is applicable.

### 4.3.1 Site Wind Speed Profile

To AS/NZS 1170.2:2002

Importance Level	IL2	
Region:	A7	
$V_R = V_{500}$ :	45	m/s (ULS)
$V_R = V_{25}$ :	37	m/s (SLS)
$M_d$ , wind direction multiplier:	1.0	Any Direction
Terrain category:	2	ULS/SLS
Height, z:	5	m
$M_{z,cat}$ , terrain multiplier:	0.91	
$M_s$ , shielding multiplier:	1.0	
$M_t$ , topographic multiplier:	1.11	
$V_{sit,\beta}$ site wind speed (ULS)	45.0	m/s
$V_{sit,\beta}$ site wind speed (SLS)	37.0	m/s

#### 4.4 Snow Actions

Snow actions are determined as defined in AS/NZS 1170.3:2003. Table 2 shows site snow parameters used to determine snow loads.

The structure is in Region N5, and the elevation is approximately 750m above sea level.

*Table 2 - Site Snow Parameters*

Property	Value
Region	N5
Exposure Category	Sub Alpine
Site elevation, Z (m)	~750 m
$s_{ULS}$	0.5 kPa
$s_{SLS}$	0.4 kPa

#### 4.5 Seismic Loads

The seismic design of the Powerhouse has been completed in accordance with NZS 3604:2011 where applicable and checked to NZS 1170.5. Wind loads govern over seismic loads for lateral design of the structure.

##### 4.5.1 Site Parameters

In accordance with NZS3604:2011.

Site subsoil class: D

Earthquake Zone: 3

##### 4.5.2 Analysis Methodology

The seismic analysis will be completed in accordance with NZS 1170.5, factored to resist a seismic return period of 500 years.

### 5 Design Criteria

#### 5.1 Seismic Deflections

General seismic deflections are designed in accordance with NZS 3604:2011. Particular elements are designed to the recommended serviceability deflection limits of AS/NZS 1170.0:2002, Table C1.

#### 5.2 Wind Deflections

Particular elements are designed to the recommended serviceability deflection limits of AS/NZS 1170.0:2002, Table C1.

#### 5.3 Gravity Deflections

Particular elements are designed to the recommended serviceability deflection limits of AS/NZS 1170.0:2002, Table C1.

## 6 Durability

### 6.1 Durability Design Life

Foundations: 50 years

Superstructure: 50 years

### 6.2 Durability Provisions

Durability provisions are achieved by:

New Zealand Building Code Acceptable Solutions – B2/AS1

- Timber: NZS 3602:2003 Part 1 is an acceptable solution for meeting durability through treatments in accordance with the standard.
- Light Timber Framing Structures: NZS 3604:1999 is an acceptable solution for meeting durability requirements of buildings within its scope and includes framing and metal fixings.

Alternative Solutions to the New Zealand Building Code

- Structural Steel: There is no acceptable solution available in the New Zealand Building Code for corrosion protection of structural steel. Protection is provided through surface treatment in accordance with NZS/AS 2312:2002

### 6.3 Summary of Surface Treatments

Table 3 below outlines the typical surface treatments to be specified for the materials used:

*Table 3 - Surface Treatments*

Element	Design Life	Corrosivity Zone (NZS3404.1:2009)	Surface Treatment in accordance with NZS/AS 2312:2014	Time to first major maintenance
Bolts	50	Zone 1	Hot-dip galvanised	25+ yrs

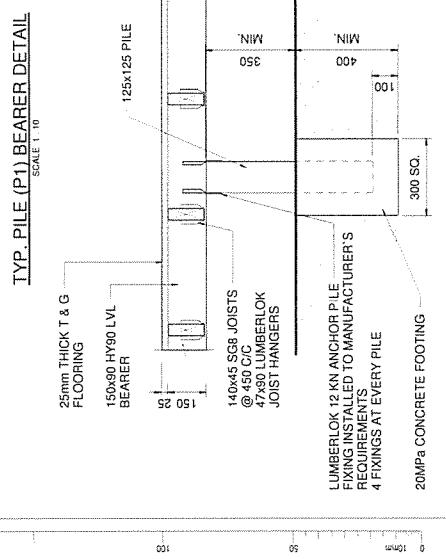

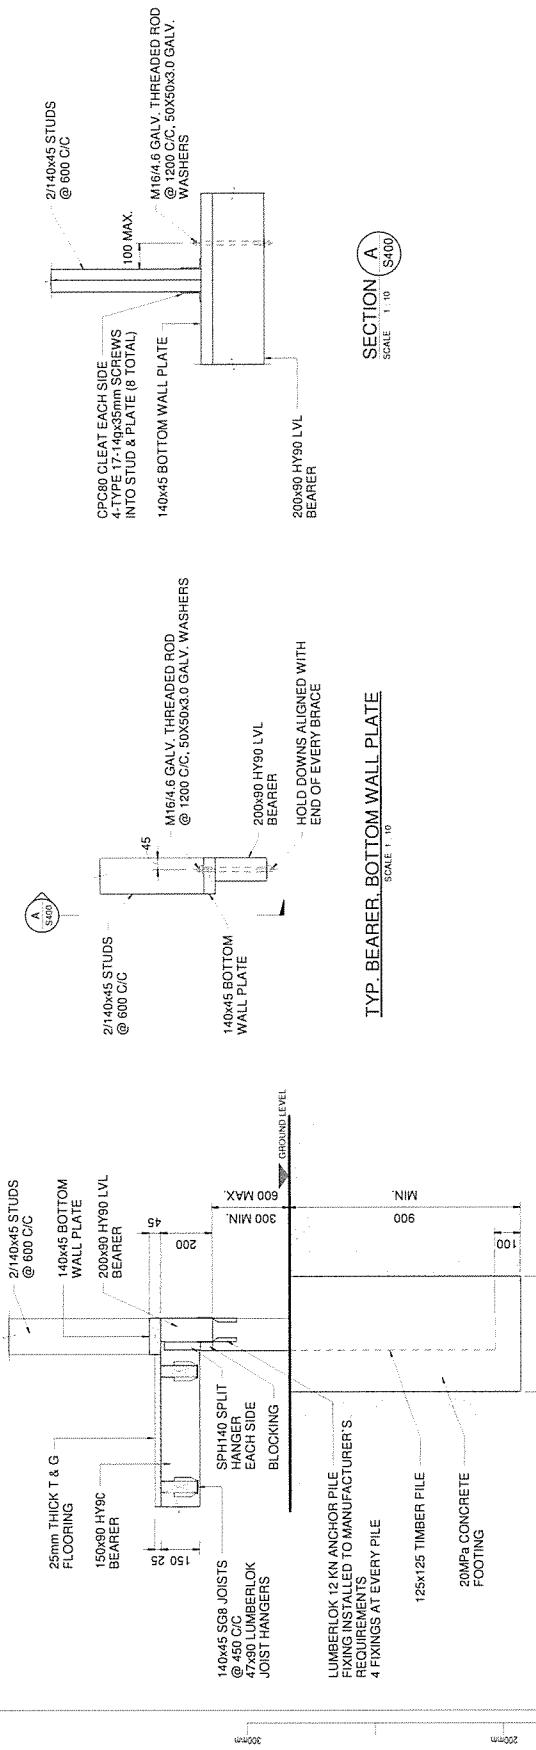

### 6.4 Fire Resistance Ratings

This design has not considered fire resistance ratings.

ENERGY

1. READ STRUCTURAL DRAWINGS WITH ALL OTHER CONTRACT DRAWINGS AND THE SPECIFICATION NOTIFICATION DISCREPANCY AND ORAL WRITTEN INSTRUCTION BEFORE PROCEEDING

2. CHECK AND VERIFY EXISTING DIMENSIONS AND LEVELS ON SITE BEFORE COMMENCING CONSTRUCTION OR SITE FABRICATION

3. DEMOLISH EXISTING WORK AS INDICATED BUT OTHERWISE, TO THE MINIMUM EXTENT NECESSARY TO CONSTRUCT NEW WORK. DEMOLITION OF EXISTING CONCRETE TO BE DELIVERED BY STRAIGHT AND REGULAR SWINGJACK UNITS. WASTE CONCRETE ON COMPLETION OF NEW WORK, PROVIDE ELEMENT PROPAGATING BRACER FOR REMOVAL AS NECESSARY

4. FOUNDATION CONSTRUCTION SHALL COMPLY WITH THE REQUIREMENTS OF NZS3601:2011 SECTION 6, UNLESS NOTED OTHERWISE

5. FOUNDATION SIZES AND DETAILS INDICATED ARE BASED ON A DEPENDABLE INSTRUMENT, BEARING PRESSURE OF 150 PA, THIS IS APPROXIMATELY EQUIVALENT TO AN ALLOWABLE BEARING CAPACITY OF 300 KPa, WHEN SUBJECT TO SEISMICALLY LOADING. CONTRACTOR TO VERIFY ALL LOCAL SOIL CONDITIONS CAPACITY AT LOCAL PENE TROCHER AT LOCATIONS INTERVALS & DEPTHS AS AGREED WITH ENGINEER

1. ALL TIMBER TO BE S3.8 GRADE RADIALA PINE, COMPLYING WITH NZS 3602 AND GRADED TONGUE & GROOVE AND TREATED TO NZS 3440

2. MAXIMUM CONTENT OF FRAMING TIMBERS SHALL NOT EXCEED 25% AT TIME OF INSTALLATION NOR 4% AT TIME OF ENDSOURCE

3. LENGTHS, SMOOTH OVERLAP, GENERAL CONSTRUCTION DETAILS SHALL COMPLY WITH REQUIREMENTS OF NZS 3604

4. PROVIDE WASHERS FOR BOLTED CONNECTIONS IN LOCATIONS AND TO SIZES REQUIRED BY NZS 3603. NOT TO EXCEED 10MM DIAMETER FOR TROUSURE OF JOINTS

5. PLATEWORK SHALL BE C4 SURFACE GRADE, AND STRENGTH GRADE M40 UNTO CONFORMING TO NZS 2690

6. ALL TIMBER INCLUDING PLANKWOOD TO BE HD TREATED

7. PROVIDED METAL TO ALL CUT TIMBER SURFACES FOR TREATMENT

8. ALL TIMBER TO TIGER GLUE, USE POLYBUTYLENE GLUE, END-SURFACE IS WIRED CLEAN BEFORE APPLYING GLUE

9. TIMBER PILES SHALL COMPLY WITH NZS 3605 AND BE HS TREATED IN ACCORDANCE WITH NZS 3600

**NOTE: UNLESS OTHERWISE SPECIFIED OR DETAILED ON THE DRAWINGS, THESE STANDARD DETAILS AND NOTES SHALL APPLY.**

and/or building consent**  
Section 33 or 45, Building Act 2004

32

QUEENSTOWN  
LAKES DISTRICT  
COUNCIL

**1. THE BUILDING** [Complete all applicable sections]

Street address of building: <i>Maitai Awarua</i>	<i>recreational reserve</i>	OFFICE USE ONLY:
<i>5.7 km no-thwart of Skippers Branches in Section 10</i>		Consent Number: .....
Legal description of land where building is located: Lot .....		DP .....
Site area ..... (m <sup>2</sup> )	Sec 148	Block X 1
Building name: .....	Valuation Number <i>Skippers Lake Survey District</i>	PIM Number: .....
Location of building within site/block number: [Include nearest street access] .....		Compliance Schedule No: .....
Number of levels: [Above & below ground] ..... 0.2		Date received: .....
Floor area: ..... 93 (m <sup>2</sup> ) [Indicate area affected by the building work]		
Current, lawfully established, use: <i>Residential Building</i>		Year First Constructed: 1835
[Add no. of occupants per level and per use if more than 1] .....		

**2. APPLICATION** [Nominate as applicable]

I request that you issue a: (for the building work described in this application)

- Project Information Memorandum (PIM)
- Project Information Memorandum (PIM) and Building Consent (BC)
- Building Consent      The existing PIM No [If applicable] is: .....
- Amendment to an existing Building Consent. The existing BC No is: .....
- Staged Consent – Being stage ..... of ..... stages

State the reference number if this application involves a National Multiple Use Approval: .....

Name: *Grant Hyatt* Signature: *Elliott* Date: *22/1/19*

The signature is that of the  Owner OR  the Agent on behalf of and with the approval of the Owner

I/we acknowledge that some communications may be by email

**3. THE PROJECT**

**DESCRIPTION OF BUILDING WORK:** (Provide sufficient information below to enable scope of work to be fully understood)

*Reconstruction at dynamic power house to preserve  
The remaining historical equipment  
Supported by DOC Heritage NZ*

Current use of building: *N/A not standing* [E.g. Home, implement shed, office]

Will the building work result in a change of use of the building?  Yes  No. If Yes, provide details of the new use of the building: .....

Intended life of the building if less than 50 years: ..... [Years]

List Building Consents previously issued for this project (if any): *N.A.*

Estimated value of the building work on which the building levy will be calculated (including goods and services tax):

\$186000 [State estimated value as defined in section 7 of the Building Act 2004]

Is prescribed energy work to be part of this Building Consent (tick if applicable) Gas  Electricity
